

Allergen Reduction

Improve the air quality in your home by reducing the level of allergens that live there!

Over 9 million people in the United Kingdom suffer from hay fever and airborne allergens, but whether you are one of them or not, everybody can benefit from cleaner air and reduced allergen levels.

The original Flash Dustmaster is blessed with powerful enough dust-grabbing fibres to tackle dust in every little nook and cranny, rather than just moving the dust around like other dusters out there.

However, unless you were a professional basketball player, there were always areas that you simply couldn't reach. Until now... the new Flash Dustmaster Extend and Reach offers you those extra inches with its long extendable handle that can stretch into out-of-reach areas like high shelves, above cupboards, light-shades and under refrigerators.

The new Dustmaster retains all the benefits of the old model:

- 1.** The 'feathers' are so lightweight that you can confidently dust delicate ornaments, such as vases and picture frames, without fear of knocking them over. This saves the time usually spent removing these ornaments one by one from shelves.
- 2.** The fibres are so effective at attracting dust and debris that any object can be made dust-free in seconds.
- 3.** The body of the duster can fit through small gaps like a cat, making even tiny spaces, such as between Venetian blinds or behind radiators, accessible. This is your access-all-areas pass to dust.

The Flash Dustmaster Extend and Reach is priced at £4.49
